

May 2006 Newsletter

Phoenix Apollo CI+MC wins the What Satellite Hardware Awards 2006!

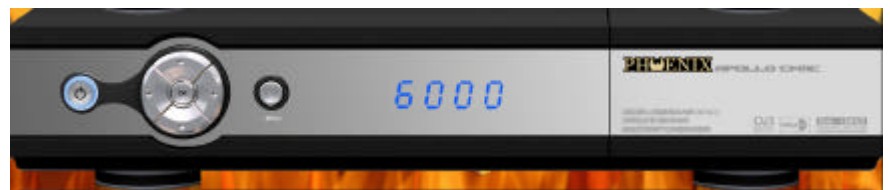

"...Our favourite this year was a late arrival-the Phoenix Apollo range-of which the CI+MC is a good example, with its programmable CAM (although it's also available in free-to-air versions). We were impressed with the built quality and connectivity, which includes RGB Scart, S-Video and digital audio out. As you'd expect, it supports fixed and DiSEqC/USALS motorised LNBs. Menus use plain English and aren't complicated, and there are 12 favourite channel lists to help sort a potential 6,000 channels, plus a 10-event timer. There's full seven-day DVB EPG support. We were very impressed by the colour and detail of the Apollo's pictures, the sound quality and the general speed of response. It's good value, and supplier Eurosat has a good reputation for customer back-up and continuing software development..."

What Satellite May 2006

To celebrate the success of the Phoenix Apollo, we'll be offering **FREE INXTC** card with all CI+MC model purchased during May 2006.

Phoenix Apollo in Black!

Due to heavy demand, the Apollo CI+MC is now also available in black at the same price as the popular silver version.
